

Air Balloons Guide

Blow up the balloon using the air pump. The switch on the pump should be in the OFF position. Place the end of the balloon over the tip of the purple nozzle and push down. The pump will turn on automatically.

1) Remove the balloon and give it a 180 degree twist. It is easy to over-inflate the balloons, so let some air out before twisting if it is too big.

2) Holding the neck of the balloon in one hand, hold an assembled stick / cup in the other hand and pull the neck of balloon down through one of the slits in the cup.

3) Wrap the neck completely around the cup

4) Hook the neck in back into the same slit and tuck the lip of the neck inside the cup.

5) Put the balloon into the carrying rack and repeat!
6) When you've inflated all the balloons you can (slowly!) carry each rack to the party room, OR just grab a bunch of balloons in each hand. Either way you'll probably need to make two trips to the party room.
